Parkside continues to expand its leading-edge MRI services with the new Avanto MR scanner

We use new technology to perform more advanced clinical applications

Parkside's 2007 MAGNETOM Avanto MRI system by Siemens with newly upgraded software captures full-body, head-to-toe scans at the highest acquisition speed without image artifacts or coverage restrictions. This high-field 1.5 Tesla magnet now enables our radiologists to perform:

- **Metastasis screening** of the entire body
- **Spectroscopy** of the brain and prostate gland
- **Diffusion imaging** of the brain, breast, spine, pelvis and abdomen for infarct and tumor evaluation
- **Diffusion tensor imaging** for white matter tract mapping

We provide unsurpassed diagnostic detail

Parkside's new technology gives you the highest resolution images of the entire body, with up to 6'9" coverage. Parallel imaging can be performed in all directions – not in just one or two directions – with thinner slice detail to improve your clinical insight as never before.

Your patients will like the Avanto, too

Avanto's new technology offers:

- **a wider bore with feet-first entries**
- **30% faster scanning times**
- **no patient or coil repositioning**
- **advanced gradient coil shielding that reduces acoustical noise by up to 97%**

A more relaxed patient leads to a better scan.

"Parkside offers the most advanced MRI experience."

William Okuno, MD
Medical Director

"Parkside has the advanced Avanto MR scanner and the staff that knows how to use it to its fullest extent. It's our people who make the difference."

20 years of Excellence in Imaging ... 6 days a week!
